

THEME 8 · B2.1

Life in the Universe & the Future

Universal issues in the future

Search for habitable planets

Space and technology

Warm-up

Look at the title: Life in the Universe & the Future. What do you think we will talk about in this theme? Tell your partner two ideas.

VOCABULARY

New words

20 target words

habitable

adj.

yaşanabilir

Scientists are searching for habitable planets beyond our solar system.

exoplanet

n.

gezegen dışı gezegen (öte-gezegen)

Astronomers have discovered thousands of exoplanets using powerful telescopes.

colonise

v.

koloni kurmak

Some scientists believe humans could colonise Mars within a century.

artificial intelligence

n. phrase

yapay zeka

Artificial intelligence could help doctors diagnose diseases faster in the future.

overpopulation

n.

aşırı nüfus artışı

Overpopulation is one of the biggest challenges facing the next century.

resource consumption

n. phrase

kaynak tüketimi

Reducing resource consumption is essential if we want a sustainable future.

sustainable

adj.

sürdürülebilir

We need more sustainable ways of producing food and energy.

renewable energy

n. phrase

yenilenebilir enerji

Many countries are investing in renewable energy instead of fossil fuels.

space exploration

n. phrase

uzay arařtırması

Space exploration has already taught us a lot about our solar system.

spacecraft

n.

uzay aracı

The spacecraft will take almost seven months to reach Mars.

astronaut

n.

astronot

The astronaut spent six months living on the space station.

telescope

n.

teleskop

The new space telescope can see galaxies billions of light years away.

galaxy

n.

gökada

Our solar system is just a tiny part of the Milky Way galaxy.

atmosphere

n.

atmosfer

Mars has a much thinner atmosphere than Earth.

climate crisis

n. phrase

iklim krizi

Future generations will have to deal with the effects of the climate crisis.

breakthrough

n.

çığır açan gelişme

The team announced a breakthrough in battery technology last month.

innovation

n.

yenilik

Technological innovation could solve many of tomorrow's problems.

terraform

v.

gezegeni dönüştürmek (dünyalaştırmak)

Some engineers dream of terraforming Mars so humans could breathe outside.

self-sufficient

adj.

kendine yeten

A colony on the Moon would need to be almost completely self-sufficient.

probe

n.

uzay sondası

The probe sent back the first close-up photos of the icy moon.

Quick game · What's the word?

“uzay sondası”

a probe

b spacecraft

c exoplanet

Quick game · What's the word?

“iklim krizi”

a climate crisis

b breakthrough

c sustainable

Quick game · What's the word?

“gezegeni dönüştürmek (dünyalaştırmak)”

a terraform

b habitable

c breakthrough

Quick game · What's the word?

“yenilik”

a exoplanet

b breakthrough

c innovation

Quick game · What's the word?

“uzay aracı”

a spacecraft

b renewable energy

c telescope

Quick game · What's the word?

“atmosfer”

a terraform

b breakthrough

c atmosphere

GRAMMAR

Zero Conditional (General Truths and Scientific Facts)

Notice

If a planet **has** no atmosphere, it **cannot support** life.

If you **heat** water to 100°C, it **boils**, even in a spacecraft's kitchen.

Astronauts **feel** weightless if there **is** no gravity around them.

If scientists **discover** water on a planet, it usually **means** the planet could support life.

What tense is used in both parts of these sentences? Are these facts always true, or only true sometimes?

Complete the rule

Look at the Notice sentences again. Complete the rule with the words in the box.

Simple Present

general truths / scientific facts

if or when

Complete the rule

We use the zero conditional for _____ that are always true.

✓ **general truths / scientific facts**

Complete the rule

Both clauses use the _____ .

✓ Simple Present

Complete the rule

We can usually replace 'if' with _____ without changing the meaning.

✓ if or when

The rule

The zero conditional describes general truths and scientific facts that are always true. Both clauses use the Simple Present: If + Simple Present, Simple Present.

TR Zero conditional, her zaman doğru olan genel gerçekleri ve bilimsel kuralları anlatmak için kullanılır. Her iki cümlecikte de Simple Present kullanılır: If + Simple Present, Simple Present.

When? We use the zero conditional for scientific facts, laws of nature and results that are always true.

TR Bilimsel gerçekleri, doğa kurallarını ve her zaman geçerli olan sonuçları anlatırken zero conditional kullanırız.

Build sentences · Example

a planet

+

have / no atmosphere

+

it / not support / life

If a planet has no atmosphere, it does not support life.

Build sentences

you + **heat / water** + **it / boil**

If you heat water, it boils.

Build sentences

there / be / no gravity + objects / float

If there is no gravity, objects float.

Build sentences

a star / run out of fuel + it / eventually / die

If a star runs out of fuel, it eventually dies.

Build sentences

scientists / find / liquid water

+

it / usually / suggest / possible life

If scientists find liquid water, it usually suggests possible life.

Build sentences

? / an astronaut / not wear / a suit + what / happen

What happens if an astronaut does not wear a suit?

Your turn

Write three zero conditional sentences about scientific facts related to space, technology or the environment.

If you...

If there is/isn't...

When scientists...

Form

POSITIVE

If you heat water, it boils.
Objects float if there is no gravity.

NEGATIVE

If a planet has no atmosphere, it doesn't support life.
Plants don't grow if they don't get light.

QUESTION

What happens if an astronaut doesn't wear a suit?
Does ice melt if you heat it?

SHORT ANSWERS

Yes, it does. / No, it doesn't.
It floats. / It melts.

Error detective

If a planet has no atmosphere, it will not support life.

a Correct

b Incorrect

✓ **If a planet has no atmosphere, it does not support life.**

Error detective

If you heated water, it boils.

a Correct

b Incorrect

✓ **If you heat water, it boils.**

A • Choose the correct option.

If a star _____ out of fuel, it eventually dies.

a runs

b will run

c ran

A • Choose the correct option.

Objects _____ if there is no gravity.

a float

b will float

c floated

A • Choose the correct option.

If you _____ ice, it melts.

a heat

b will heat

c heated

B · Complete with the correct form.

If a planet _____ (have) liquid water, it might support life.

✓ has

B · Complete with the correct form.

Plants _____ (not / grow) if they don't get light.

✓ **don't grow**

C · Judge the sentence.

If you mix hydrogen and oxygen correctly, you get water.

a Correct

b Incorrect

C · Judge the sentence.

If a rocket will lose power, it falls back to Earth.

a Correct

b Incorrect

✓ **If a rocket loses power, it falls back to Earth.**

Dialogue · Complete with the correct form.

A: What _____ (happen) if a spacecraft _____ (lose) contact with Earth?

✓ happens / loses

Dialogue · Reorder the sentence.

life / a planet / support / has / it / if / an atmosphere

life

an

can

atmosphere,

a

it

if

planet

has

support

.

✓ **If a planet has an atmosphere, it can support life.**

GRAMMAR

First Conditional (Real Future Possibilities)

Notice

If scientists **find** a habitable planet, humanity **will have** a new home.

We **will solve** the overpopulation problem if we **develop** better technology.

If we **don't reduce** our resource consumption, future generations **will suffer**.

If the mission **is** successful, astronauts **will land** on Mars by 2040.

Are these situations real possibilities for the future, or impossible dreams? What tense follows 'if', and what tense is in the main clause?

Complete the rule

Complete the rule with the words in the box.

will + base verb

Simple Present

a real, possible future result

Complete the rule

We use the first conditional for _____.

✓ a real, possible future result

Complete the rule

The if-clause uses the _____.

✓ Simple Present

Complete the rule

The main clause uses _____ .

✓ **will + base verb**

The rule

The first conditional describes a real, likely situation in the future and its result. If + Simple Present, will + base verb.

TR First conditional, gelecekte gerçekleşmesi mümkün olan durumlar ve sonuçları için kullanılır. If + Simple Present, will + fiil.

When? We use the first conditional to talk about realistic future predictions, plans and likely results.

TR Gelecekle ilgili gerçekçi tahminler, planlar ve olası sonuçlar hakkında konuşurken first conditional kullanırız.

Build sentences · Example

scientists / find / a habitable planet

+

humanity / have / a new home

If scientists find a habitable planet, humanity will have a new home.

Build sentences

we / develop / better technology

+

we / solve / the overpopulation problem

If we develop better technology, we will solve the overpopulation problem.

Build sentences

we / not reduce / resource consumption + **future generations / suffer**

If we don't reduce resource consumption, future generations will suffer.

Build sentences

the mission / be / successful

+

astronauts / land / on Mars by 2040

If the mission is successful, astronauts will land on Mars by 2040.

Build sentences

? / you / discover / a new planet + what / you / call / it

If you discover a new planet, what will you call it?

Your turn

Write three first conditional sentences predicting real possibilities for the future of technology or space exploration.

If scientists...

If we don't...

If humans...

Form

POSITIVE

If we develop better technology, we will solve the problem.

Astronauts will land on Mars if the mission is successful.

NEGATIVE

If we don't act now, the climate crisis will get worse.

We won't find life if we don't keep exploring.

QUESTION

What will happen if we discover a new planet?

Will humans live on Mars if it becomes habitable?

SHORT ANSWERS

Yes, they will. / No, they won't.

It will get worse. / We won't.

Error detective

If we will develop better technology, we will solve the problem.

a Correct

b Incorrect

✓ **If we develop better technology, we will solve the problem.**

Error detective

If scientists find a new planet, they named it quickly.

a Correct

b Incorrect

✓ **If scientists find a new planet, they will name it quickly.**

A • Choose the correct option.

If we _____ our resource consumption, future generations will suffer.

a don't reduce

b won't reduce

c didn't reduce

A • Choose the correct option.

If the mission is successful, astronauts _____ on Mars.

a land

b will land

c landed

A • Choose the correct option.

Humanity _____ a new home if scientists find a habitable planet.

a will have

b has

c had

B · Complete with the correct form.

If we _____ (develop) better technology, we will solve the overpopulation problem.

✓ develop

B · Complete with the correct form.

The climate crisis _____ (get) worse if we don't act now.

✓ will get

C · Judge the sentence.

If humans build a colony on the Moon, it will need to be self-sufficient.

a Correct

b Incorrect

C · Judge the sentence.

If we will not protect the environment, life will become harder.

a Correct

b Incorrect

✓ **If we do not protect the environment, life will become harder.**

Dialogue · Complete with the correct form.

A: What _____ (happen) if scientists _____ (discover) an exoplanet like Earth?

✓ will happen / discover

Dialogue · Reorder the sentence.

will / astronauts / land / on Mars / by 2040 / if the mission / is successful

successful, 2040 land Mars by on mission the is will

astronauts if

.

✓ **If the mission is successful, astronauts will land on Mars by 2040.**

GRAMMAR

Second Conditional (Unreal or Unlikely Present-Future Situations)

Notice

If we **lived** on Mars, we **would need** artificial oxygen every day.

If humanity **discovered** another Earth-like planet, it **wouldn't solve** our problems on Earth immediately.

What **would** you **do** if you **had** the chance to travel to space?

If I **were** a scientist, I **would focus** on renewable energy.

Are these situations real or imagined/unlikely? What form of the verb follows 'if', and what comes in the main clause?

Complete the rule

Complete the rule with the words in the box.

Simple Past

would + base verb

unreal or unlikely

were

Complete the rule

We use the second conditional for _____ present or future situations.

✓ unreal or unlikely

Complete the rule

The if-clause uses the _____.

✓ **Simple Past**

Complete the rule

The main clause uses _____.

✓ **would + base verb**

Complete the rule

With 'I' and 'he/she/it', we often use _____ instead of 'was' in formal English.

✓ were

The rule

The second conditional describes unreal, imaginary or unlikely present/future situations. If + Simple Past, would + base verb. With I/he/she/it, formal English often prefers 'were' instead of 'was'.

TR Second conditional, gerçek olmayan, hayali ya da gerçekleşmesi pek olası olmayan şimdiki/gelecekteki durumlar için kullanılır. If + Simple Past, would + fiil. 'I/he/she/it' ile resmi İngilizcede 'was' yerine 'were' tercih edilir.

When? We use the second conditional to imagine impossible or very unlikely future scenarios.

TR Hayal kurarken, imkansız ya da çok düşük ihtimalli gelecek senaryolarını tartışırken second conditional kullanırız.

Build sentences · Example

we / live / on Mars

+

we / need / artificial oxygen

If we lived on Mars, we would need artificial oxygen.

Build sentences

I / be / a scientist

+

I / focus / on renewable energy

If I were a scientist, I would focus on renewable energy.

Build sentences

humanity / discover / another Earth-like planet +

it / not solve / our problems immediately

If humanity discovered another Earth-like planet, it would not solve our problems immediately.

Build sentences

governments / invest / more in space research +

we / travel / to other planets sooner

If governments invested more in space research, we would travel to other planets sooner.

Build sentences

? / you / have / the chance to travel to space

+

what / you / do

What would you do if you had the chance to travel to space?

Your turn

Write three second conditional sentences imagining unlikely or impossible future situations related to space or technology.

If I were...

If we lived on...

If scientists discovered...

Form

POSITIVE

If we lived on Mars, we would need artificial oxygen.
I would explore space if I were an astronaut.

NEGATIVE

If humanity discovered a new planet, it wouldn't solve everything.
We wouldn't survive there if we didn't bring water.

QUESTION

What would you do if you had the chance to travel to space?
Would you live on another planet if you could?

SHORT ANSWERS

Yes, I would. / No, I wouldn't.
It would need... / It wouldn't need...

Error detective

If we would live on Mars, we would need oxygen.

a Correct

b Incorrect

✓ If we lived on Mars, we would need oxygen.

Error detective

If I was a scientist, I would study black holes.

a Correct

b Incorrect

✓ If I were a scientist, I would study black holes.

A • Choose the correct option.

If we _____ on Mars, we would need artificial oxygen.

a live

b lived

c will live

A • Choose the correct option.

If I _____ a scientist, I would study black holes.

a am

b was

c were

A • Choose the correct option.

What _____ you do if you had the chance to travel to space?

a will

b would

c do

B · Complete with the correct form.

If governments _____ (invest) more in space research, we would travel further.

✓ **invested**

B · Complete with the correct form.

Humanity _____ (not / solve) all its problems if it discovered a new planet.

✓ wouldn't solve / would not solve

C · Judge the sentence.

If I had the chance, I would join a mission to Mars.

a Correct

b Incorrect

C · Judge the sentence.

If humans would live on the Moon, they would need domes.

a Correct

b Incorrect

✓ **If humans lived on the Moon, they would need domes.**

Dialogue · Complete with the correct form.

A: If you _____ (can) design a spacecraft, what _____ (it / look) like?

✓ could / would it look

Dialogue · Reorder the sentence.

would / oxygen / we / on Mars / if / lived / need / we

need

if

Mars,

lived

on

would

oxygen

we

we

.

✓ **If we lived on Mars, we would need oxygen.**

GRAMMAR

Wish Clauses (Wishes about the Present and the Past)

Notice

I wish we **had** cleaner energy today — pollution is such a huge problem.

Scientists wish they **knew** more about distant galaxies right now.

I wish humanity **had discovered** a habitable planet years ago.

She wishes she **could travel** to space one day.

Which wishes are about the present, and which are about the past? What verb forms follow 'wish' in each case?

Complete the rule

Complete the rule with the words in the box.

Simple Past

Past Perfect

could + base verb

a present situation you want to be different

a past situation you regret

Complete the rule

Wish + _____ describes _____ .

✓ Simple Past / a present situation you want to be different

Complete the rule

Wish + _____ describes _____ .

✓ Past Perfect / a past situation you regret

Complete the rule

Wish + _____ talks about an ability or possibility you want now.

✓ could + base verb

The rule

Wish + Simple Past describes a present situation we want to be different. Wish + Past Perfect describes a past situation we regret. Wish + could + base verb expresses a present wish for ability or possibility.

TR Wish + Simple Past, şimdiki zamanda farklı olmasını istediğimiz bir durumu anlatır. Wish + Past Perfect, geçmişte pişmanlık duyduğumuz bir durumu anlatır. Wish + could + fiil, şu anki bir yetenek ya da imkan isteğini anlatır.

When? We use wish clauses when we are unhappy with a present situation, or when we regret something we did or didn't do in the past.

TR Şu anki durumdan memnun olmadığımızda ya da geçmişte farklı bir şey yapmış olmayı dilediğimizde wish cümlelerini kullanırız.

Build sentences · Example

we

+

not have / cleaner energy (now)

I wish we had cleaner energy.

Build sentences

scientists

+

not know / more about distant galaxies (now)

Scientists wish they knew more about distant galaxies.

Build sentences

humanity

+

not discover / a habitable planet (years ago)

I wish humanity had discovered a habitable planet years ago.

Build sentences

she

+

not can travel / to space (now / ability)

She wishes she could travel to space.

Build sentences

we

+

not start / protecting the environment earlier (in the past)

I wish we had started protecting the environment earlier.

Your turn

Write three wish sentences: one about the present (something you want to be different now), one about the past (something you regret), and one using 'wish...could'.

I wish...

I wish I had/hadn't...

I wish I could...

Form

POSITIVE

I wish we had cleaner energy.

I wish humanity had discovered a habitable planet.

NEGATIVE

I wish we didn't waste so much water.

She wishes she hadn't ignored the warnings.

QUESTION

What do you wish scientists knew?

Do you wish you could travel to space?

SHORT ANSWERS

I wish I could. / I don't really wish that.

Yes, I do. / No, not really.

Error detective

I wish we have cleaner energy.

a Correct

b Incorrect

✓ **I wish we had cleaner energy.**

Error detective

I wish humanity discovered a planet years ago.

a Correct

b Incorrect

✓ **I wish humanity had discovered a planet years ago.**

A • Choose the correct option.

I wish scientists _____ more about distant galaxies right now.

a know

b knew

c had known

A • Choose the correct option.

I wish we _____ started protecting the environment earlier.

a have

b had

c would

A • Choose the correct option.

She wishes she _____ travel to space one day.

a can

b could

c will

B · Complete with the correct form.

I wish we _____ (have) cleaner air in our cities.

✓ had

B · Complete with the correct form.

I wish humanity _____ (discover) a habitable planet years ago.

✓ **had discovered**

C · Judge the sentence.

I wish I could see the stars more clearly from the city.

a Correct

b Incorrect

C · Judge the sentence.

I wish scientists will find a solution soon.

a Correct

b Incorrect

✓ **I wish scientists would find a solution soon.**

Dialogue · Complete with the correct form.

A: Do you ever wish you _____ (be) an astronaut? B: Yes! I wish I _____ (start) studying physics earlier.

✓ were / had started

Dialogue · Reorder the sentence.

wish / cleaner / had / I / we / energy

had

cleaner

I

we

energy

wish

•

✓ **I wish we had cleaner energy.**

READING

The Hunt for a Second Earth

Before you read

1. Look at the title. What do you think 'a second Earth' means?
2. What do you already know about how scientists search for planets outside our solar system?

THE HUNT FOR A SECOND EARTH · 1 / 3

For centuries, humans have looked up at the night sky and wondered whether we are alone in the universe. Today, that question is closer to being answered than ever before. Using powerful space telescopes, astronomers have identified thousands of exoplanets — planets that orbit stars outside our solar system — and a growing number of them lie in what scientists call the 'habitable zone', the narrow distance from a star where temperatures allow liquid water to exist.

THE HUNT FOR A SECOND EARTH · 2 / 3

Finding an exoplanet is only the first step. To know whether a planet could actually support life, researchers study its atmosphere, its size, and the type of star it orbits. If a planet is too close to its star, it will be far too hot; if it is too far away, any water on its surface will freeze. Even a planet in the habitable zone might lack a protective atmosphere, leaving it exposed to deadly radiation. Because of these strict conditions, scientists estimate that only a small fraction of the exoplanets discovered so far could realistically host life.

THE HUNT FOR A SECOND EARTH · 3 / 3

Even so, the search continues, and new missions are launched almost every year. Some researchers believe that if we keep improving our telescopes and analysis methods, we will find strong evidence of a genuinely habitable world within the next few decades. Others are more cautious, arguing that space is so vast that finding the right planet — let alone actual life on it — could still take much longer. Either way, the hunt for a second Earth has changed the way many people think about humanity's place in the universe.

While you read

What is the main idea of the text?

a

Scientists have already found a second Earth.

b

Astronomers are searching for exoplanets that could support life, but the conditions are very strict.

c

Space telescopes are too weak to find any exoplanets.

While you read

The 'habitable zone' is the distance from a star where _____
can exist.

✓ liquid water

While you read

According to the text, a planet too close to its star will be:

a too cold

b too hot

c too small

While you read

All exoplanets found in the habitable zone are known to support life.

a Correct

b Incorrect

✓ Only a small fraction of exoplanets discovered so far could realistically host life.

While you read

A planet without a protective atmosphere is exposed to deadly

_____ •

✓ **radiation**

After you read

1. Do you think humanity will find clear evidence of a habitable exoplanet in your lifetime?
Why or why not?
2. Write one sentence using the first conditional about what might happen if scientists find a truly habitable planet.

READING

Life in 2126: Three Predictions

Before you read

1. What do you imagine daily life will be like in 100 years?
2. Which area do you think will change the most: energy, technology, or space exploration?

LIFE IN 2126: THREE PREDICTIONS · 1 / 3

What will daily life look like a century from now? No one can predict the future with certainty, but many scientists, engineers and futurists agree on a few likely directions, based on trends that are already visible today.

LIFE IN 2126: THREE PREDICTIONS · 2 / 3

The first prediction concerns energy and the environment. If humanity continues to rely on fossil fuels, the climate crisis will almost certainly get worse, with more extreme weather and rising sea levels. Many experts believe, however, that renewable energy will become the main power source worldwide well before 2126, driven by both necessity and rapidly falling costs. Cities may be redesigned to be almost completely self-sufficient, generating their own energy and recycling nearly all their waste.

LIFE IN 2126: THREE PREDICTIONS · 3 / 3

The second prediction involves artificial intelligence and automation. Machines already perform many tasks once done only by humans, from analysing medical scans to writing simple reports. If this trend continues, entire industries could look completely different, and people may spend far more time on creative, social or scientific work rather than routine tasks. Finally, many researchers expect real progress in space technology: permanent research bases on the Moon, regular cargo flights to Mars, and perhaps even the first small human settlements beyond Earth. Whether these predictions come true exactly as described, one thing seems certain — the next century will bring changes as dramatic as anything in the last hundred years.

While you read

What is the text mainly about?

a

A history of space exploration

b

Predictions about energy, technology and space in the next century

c

A list of countries with the best universities

While you read

Many experts believe _____ will become the main power source worldwide before 2126.

✓ renewable energy

While you read

According to the text, artificial intelligence has had no effect on jobs so far.

a Correct

b Incorrect

✓ **Machines already perform many tasks once done only by humans.**

While you read

What does the text suggest about future cities?

a They may become almost completely self-sufficient.

b They will stop using any energy at all.

c They will be abandoned in favour of space colonies.

While you read

**Researchers expect permanent research bases on the _____
and regular cargo flights to Mars.**

✓ **Moon**

After you read

1. Which of the three predictions in the text do you find most exciting or most worrying?
Why?
2. Write one sentence with 'I wish' about something you would like to be different in today's world.

LISTENING

A Podcast About Habitable Planets

Before you listen

1. Predict: what three things do you think the podcast host will explain about habitable planets?

A Podcast About Habitable Planets

Ses kaydı yakında — transkripti öğretmen okuyabilir.

While you listen

According to the guest, what does a planet need to allow liquid water?

a The right distance from its star

b A very fast rotation

c A large number of moons

While you listen

Mars currently has a thick, protective atmosphere.

a Correct

b Incorrect

✓ **Mars lost most of its atmosphere millions of years ago.**

While you listen

Without an atmosphere, a planet cannot hold on to _____ or protect itself from radiation.

✓ heat

While you listen

What would scientists still need after finding water and a thick atmosphere?

a More evidence, such as signs of gases produced by living things

b Nothing else at all

c Proof that the planet has no moons

LISTENING

Class Talk: The Future Solutions Project

Before you listen

1. What universal issue would you most like to design a solution for: overpopulation, pollution, or resource consumption?

Class Talk: The Future Solutions Project

Ses kaydı yakında — transkripti öğretmen okuyabilir.

While you listen

What is the main task the teacher describes?

a Write an essay about the history of technology

b Design a technology that solves a universal issue and write a futuristic journal entry

c Memorise a list of inventions

While you listen

Students should choose one issue such as overpopulation, resource consumption, or _____.

✓ environmental crises

While you listen

Students will present their ideas individually.

a Correct

b Incorrect

✓ **Students will present their ideas in pairs.**

SPEAKING

If We Could Solve One Problem...

In pairs, discuss universal issues that could affect the next century, such as overpopulation, resource consumption, or the climate crisis. Use at least two conditional sentences (zero, first or second) and one wish clause. Then join another pair and share your best idea.

SPEAKING

My Futuristic Journal Entry

Imagine you are living one hundred years in the future. Prepare a two-minute talk describing a normal day in your life, including at least one piece of advanced technology that solved a universal issue and how life is different from today.

WRITING

A Futuristic Journal Entry

Write a futuristic journal entry (120–150 words) as if you are living in the year 2126. Describe your day, mention one universal issue that has been solved (or made worse), and refer to at least one piece of advanced technology.

WRITING

A Proposal: My Invention for the Future

Write a short proposal describing an invention or piece of technology that could help solve a universal issue such as overpopulation, resource consumption, or environmental crises. Explain what it does, how it works, and what would happen if it were used widely.

REVIEW

Exit ticket

Exit ticket

If a planet _____ no atmosphere, it cannot support life.

a has

b will have

c had

Exit ticket

If scientists find a habitable planet, humanity _____ a new home.

a has

b will have

c would have

Exit ticket

If we _____ (live) on Mars, we would need artificial oxygen.

✓ lived

Exit ticket

I wish we _____ (have) cleaner energy today.

✓ had

Exit ticket

Which sentence uses the zero conditional correctly?

a

If you heat water, it will boil.

b

If you heat water, it boils.

c

If you heated water, it boils.

Exit ticket

If humanity would discover a new planet, it would change everything.

a Correct

b Incorrect

✓ **If humanity discovered a new planet, it would change everything.**

Exit ticket

I wish humanity _____ (discover) a habitable planet years ago.

✓ had discovered

Exit ticket

Which word describes a planet that could support life?

a habitable

b self-sufficient

c renewable

Exit ticket

To 'terraform' a planet means to _____ .

a change its environment
to make it suitable for
life

b send a probe to take
photos of it

c calculate the distance
between it and Earth

Exit ticket

If we _____ (colonise) Mars one day, we would need sustainable resources to survive.

✓ colonised

Exit ticket

Put the words in order.

robots

most

probably

will

the

factory

jobs

in

do

future

•

✓ **Robots will probably do most factory jobs in the future.**

Exit ticket

If robots will replace factory workers, many people will need new skills.

a Correct

b Incorrect

✓ **If robots replace factory workers, many people will need new skills.**

Exit ticket
