The Classroom of Tomorrow

Before you read

- What technology would you like to have in your classroom?

Many schools already use interactive whiteboards, tablets, and online platforms to make lessons more engaging. Teachers say these tools give instant feedback and help students access resources at home too.

In the future, classrooms will probably use even more advanced technology. Some experts believe virtual reality will let students visit ancient Rome or explore the human body without leaving the room. Artificial intelligence is going to help teachers by suggesting personalised exercises for each student.

Of course, technology can also be a distraction — students sometimes use their devices for games instead of learning. That's why many schools are going to introduce clearer rules about when devices can be used.

1. What do teachers say online platforms help students do?

- a. Play games
- b. Access resources at home
- c. Avoid homework
- d. Skip lessons

2. Artificial intelligence is going to suggest _____ exercises.

3. Technology can never be a distraction, according to the text. — *True / False*

After you read

- Do you think future classrooms will have fewer teachers? Why or why not?
