### Protecting Our Planet's Animals

#### Before you read

- Do you know any endangered animals?

Many animals around the world are now endangered because of deforestation, pollution, and climate change. If we don't protect natural habitats, more species will become extinct in the coming decades.

Conservation organisations are working hard to help. They plant trees to restore forests, clean up polluted rivers, and protect wildlife reserves. If more countries switch to renewable and sustainable energy, scientists believe we will slow down climate change significantly.

Small actions matter too. If every family reduces plastic waste and recycles more, together we will make a real difference for future generations of both people and animals.

**1.** What three causes of endangerment are mentioned?

- a. War, farming, tourism
- b. Deforestation, pollution, climate change
- c. Hunting, fishing, mining
- d. Noise, traffic, construction

**2.** Conservation organisations plant trees to restore \_\_\_\_\_.

**3.** The text says small actions don't matter. — *True / False*

#### After you read

- What is one action you could take to help protect wildlife?
