Life on a Space Station

Before you read

- What do you think daily life is like for an astronaut?

Living on a space station is very different from life on Earth. Astronauts experience weightlessness, so everyday tasks like eating and sleeping require special equipment and training. A mission on the International Space Station usually lasts about six months.

Space exploration is developing fast. Scientists send probes and spacecraft to study distant planets, and many experts believe humans will land on Mars within the next few decades. Some scientists even think we will try to colonise Mars one day, using advanced technology to sustain human life there.

Of course, nobody knows the future for certain. Space travel probably won't become as easy as taking a plane any time soon, but each new mission brings us closer to answering big questions about our universe.

1. How long does a typical ISS mission last?

- a. One month
- b. Six months
- c. One year
- d. Ten years

2. Astronauts experience _____ on the space station.

3. The text says space travel will definitely become as easy as flying by plane soon. — *True / False*

After you read

- Would you like to become an astronaut? Why or why not?
