### A Day in Our Classroom

#### Before you read

- Look at the title. What kinds of activities do you expect in a typical school day?
- Think about your own favourite classroom activity before you read.

Every morning, our classroom is full of different learning activities. In the first lesson, we usually work in pairs and check our homework together. Our teacher walks around the room, listens to our conversations, and gives quick feedback when we make a mistake. Some students prefer working alone, but most of us enjoy pair work because we can help each other understand new words.

Later in the day, we often do a short presentation. Each group chooses a topic, prepares a few slides, and speaks in front of the class. At first, many students feel nervous, but after a few presentations, they become more confident. Presentations are also a great way to practise pronunciation and organise ideas clearly.

In the afternoon, we sometimes use a tablet or a computer for an online quiz. This is going to be a normal part of every lesson soon, because our school is going to buy more digital devices next year. Some students are visual learners and remember new grammar better when they see a diagram on the screen, while others are auditory learners and prefer listening to a short recording.

At the end of the day, the teacher gives us a handout with revision notes and says, 'You should read this at home tonight.' Not every student agrees on the best learning style, but everyone must complete the homework by the next lesson. For most of us, a mix of pair work, presentations, and technology makes learning more interesting than just reading from a book.

1. What happens during the first lesson, according to the text?
  - a. Students watch a video alone.
  - b. Students work in pairs and check homework.
  - c. Students take a test.
  - d. Students clean the classroom.
2. According to the text, all students feel confident the first time they give a presentation. — *True / False*
3. Why does the school plan to buy more digital devices?
  - a. Because students dislike technology.
  - b. Because online quizzes will become a normal part of every lesson.
  - c. Because the teacher wants a new phone.
  - d. The text doesn't say.
4. According to the text, visual learners remember grammar better when they see a \_\_\_\_\_ on the screen.

**5. What must every student do, according to the text?**

- AbOnlinEnglish Upper Secondary — 10. Sınıf — Reading · Orijinal içerik, TYMM müfredatıyla uyumlu.
- a. Buy a tablet.
  - b. Complete the homework by the next lesson.
  - c. Give a presentation every day.
  - d. Choose only one learning style.

**6. The text says a mix of pair work, presentations, and technology makes learning more interesting for most students. — True / False**

**After you read**

- Which activity from the text is most similar to something you do in your own classroom?
- Do you agree that a mix of activities makes learning more interesting? Why?

**Finding Your Own Learning Style**

**Before you read**

- What do you think 'learning style' means?
- Guess one way you learn best before reading the text.

Not every student learns in the same way, and understanding your own learning style can make studying easier. Some people are visual learners: they remember information better when they see it as a picture, colour, or diagram. Other people are auditory learners, who understand a new grammar point more easily after listening to an explanation or a recording rather than reading it silently.

There is also a third common style, sometimes called hands-on or kinaesthetic learning. Students with this style often say that they learn best by doing something practical, such as acting out a dialogue, building a model, or moving around the classroom during an activity. If you often find yourself doodling in the margin of your notebook, you might actually be a hands-on learner who needs movement to concentrate.

Of course, most students are not only one type. You might be mainly a visual learner but still enjoy listening to a short podcast, and you should try different methods before deciding what works best for you. A simple way to discover your style is to keep a short learning diary for two weeks and write down which activities helped you remember new vocabulary or grammar most easily.

Teachers can support different learning styles by mixing activities: showing a diagram for visual learners, playing a short recording for auditory learners, and adding a hands-on task like a role-play for kinaesthetic learners. As a student, you don't have to wait for the teacher to do this — you can also adapt your own revision at home, for example by turning your notes into a mind map, a short recording, or flashcards you can hold and sort.

**1. What is true about auditory learners, according to the text?**

- a. They prefer moving around the classroom.
- b. They remember information better through listening.
- c. They never use diagrams.
- d. They dislike podcasts.

**2. A student who often doodles in the margin might actually be a \_\_\_\_\_ learner.**

**3. According to the text, most students belong to only one single learning style. — True / False**

**4. What does the text suggest as a way to discover your own learning style?**

- a. Ask a friend to guess.
- b. Keep a short learning diary for two weeks.
- c. Only use flashcards.
- d. Avoid all technology.

**5. According to the last paragraph, what can students do at home without waiting for the teacher?**

- a. Nothing, they must wait for class.
- b. Adapt their own revision, e.g. mind maps or flashcards.
- c. Change the school timetable.
- d. Only listen to recordings.

**6. The text suggests teachers should only use one type of activity to be fair to every learning style. — *True / False***

**After you read**

- Which learning style described in the text sounds most like you?
- What is one new study method from the text that you might try this week?
