Aim Learn the target words of the theme with their meanings, pronunciation and examples, and use them correctly in sentences.

A Word list

Read the words and the example sentences aloud.

#	WORD	TYPE	PRONUNCIATION	TÜRKÇE	EXAMPLE
1	habitable	adj.		yaşanabilir	Scientists are searching for habitable planets beyond our solar system.
2	exoplanet	n.		gezegen dışı gezegen (öte-gezegen)	Astronomers have discovered thousands of exoplanets using powerful telescopes.
3	colonise	v.		koloni kurmak	Some scientists believe humans could colonise Mars within a century.
4	artificial intelligence	n. phrase		yapay zeka	Artificial intelligence could help doctors diagnose diseases faster in the future.
5	overpopulation	n.		aşırı nüfus artışı	Overpopulation is one of the biggest challenges facing the next century.
6	resource consumption	n. phrase		kaynak tüketimi	Reducing resource consumption is essential if we want a sustainable future.
7	sustainable	adj.		sürdürülebilir	We need more sustainable ways of producing food and energy.
8	renewable energy	n. phrase		yenilenebilir enerji	Many countries are investing in renewable energy instead of fossil fuels.
9	space exploration	n. phrase		uzay araştırması	Space exploration has already taught us a lot about our solar system.
10	spacecraft	n.		uzay aracı	The spacecraft will take almost seven months to reach Mars.

#	WORD	TYPE	PRONUNCIATION	TÜRKÇE	EXAMPLE
11	astronaut	n.		astronot	<i>The astronaut spent six months living on the space station.</i>
12	telescope	n.		teleskop	<i>The new space telescope can see galaxies billions of light years away.</i>
13	galaxy	n.		gökada	<i>Our solar system is just a tiny part of the Milky Way galaxy.</i>
14	atmosphere	n.		atmosfer	<i>Mars has a much thinner atmosphere than Earth.</i>
15	climate crisis	n. phrase		iklim krizi	<i>Future generations will have to deal with the effects of the climate crisis.</i>
16	breakthrough	n.		çığır açan gelişme	<i>The team announced a breakthrough in battery technology last month.</i>
17	innovation	n.		yenilik	<i>Technological innovation could solve many of tomorrow's problems.</i>
18	terraform	v.		gezegeni dönüştürmek (dünyalaştırmak)	<i>Some engineers dream of terraforming Mars so humans could breathe outside.</i>
19	self-sufficient	adj.		kendine yeten	<i>A colony on the Moon would need to be almost completely self-sufficient.</i>
20	probe	n.		uzay sondası	<i>The probe sent back the first close-up photos of the icy moon.</i>

1 Match the words with their meanings.

8 × 1 pts

Write the correct letter in the box.

1	habitable	☐	a	yenilenebilir enerji
2	exoplanet	☐	b	koloni kurmak
3	colonise	☐	c	gezegen dışı gezegen (öte-gezegen)
4	artificial intelligence	☐	d	yapay zeka
5	overpopulation	☐	e	yaşanabilir
6	resource consumption	☐	f	sürdürülebilir
7	sustainable	☐	g	kaynak tüketimi
8	renewable energy	☐	h	aşırı nüfus artışı

2 Complete the sentences with the words in the box.

8 × 1 pts

Use each word once.

colonise overpopulation renewable energy artificial intelligence habitable sustainable
resource consumption space exploration

1. Scientists are searching for _____ planets beyond our solar system.
2. Some scientists believe humans could _____ Mars within a century.
3. _____ could help doctors diagnose diseases faster in the future.
4. _____ is one of the biggest challenges facing the next century.
5. Reducing _____ is essential if we want a sustainable future.
6. We need more _____ ways of producing food and energy.
7. Many countries are investing in _____ instead of fossil fuels.
8. _____ has already taught us a lot about our solar system.

3 Write your own sentences.*Use each word in a sentence about the theme.*

1. **innovation**

2. **terraform**

3. **self-sufficient**

4. **probe**

Aim Discover the grammar from examples, explain the rule in your own words and use it correctly in context.

Zero Conditional (General Truths and Scientific Facts)

1 · NOTICE

- If a planet **has** no atmosphere, it **cannot support** life.
- If you **heat** water to 100°C, it **boils**, even in a spacecraft's kitchen.
- Astronauts **feel** weightless if there **is** no gravity around them.
- If scientists **discover** water on a planet, it usually **means** the planet could support life.

What tense is used in both parts of these sentences? Are these facts always true, or only true sometimes?

2 · DISCOVER — A · COMPLETE THE RULE

Look at the Notice sentences again. Complete the rule with the words in the box.

Simple Present

general truths / scientific facts

if or when

1. We use the zero conditional for _____ that are always true.
2. Both clauses use the _____.
3. We can usually replace 'if' with _____ without changing the meaning.

B Build sentences

Use the cues to build true zero conditional sentences about space and science.

e.g.

a planet

have / no atmosphere

it / not support / life

If a planet has no atmosphere, it does not support life.

1. you heat / water it / boil

2. there / be / no gravity objects / float

3. a star / run out of fuel it / eventually / die

4. scientists / find / liquid water it / usually / suggest / possible life

5. ? / an astronaut / not wear / a suit what / happen

C Your turn

Write three zero conditional sentences about scientific facts related to space, technology or the environment.

If you...

If there is/isn't...

When scientists...

RULE

The zero conditional describes general truths and scientific facts that are always true. Both clauses use the Simple Present: If + Simple Present, Simple Present.

TR Zero conditional, her zaman doğru olan genel gerçekleri ve bilimsel kuralları anlatmak için kullanılır. Her iki cümlecikte de Simple Present kullanılır: If + Simple Present, Simple Present.

When?

We use the zero conditional for scientific facts, laws of nature and results that are always true.

TR Bilimsel gerçekleri, doğa kurallarını ve her zaman geçerli olan sonuçları anlatırken zero conditional kullanırız.

POSITIVE	NEGATIVE	QUESTION	SHORT ANSWERS
If you heat water, it boils. Objects float if there is no gravity.	If a planet has no atmosphere, it doesn't support life. Plants don't grow if they don't get light.	What happens if an astronaut doesn't wear a suit? Does ice melt if you heat it?	Yes, it does. / No, it doesn't. It floats. / It melts.

X WRONG	✓ RIGHT	WHY?
If a planet has no atmosphere, it will not support life.	If a planet has no atmosphere, it does not support life.	The zero conditional never uses 'will'; both clauses take the Simple Present. TR Zero conditional'da 'will' kullanılmaz; iki cümlecik de Simple Present olmalıdır.
If you heated water, it boils.	If you heat water, it boils.	The if-clause also needs the Simple Present, not a past tense. TR If cümlecğinde de Simple Present kullanılmalıdır, geçmiş zaman değil.

1 Choose the correct option.

3 × 1 pts

- If a star _____ out of fuel, it eventually dies.
☐ a runs ☐ b will run ☐ c ran
- Objects _____ if there is no gravity.
☐ a float ☐ b will float ☐ c floated
- If you _____ ice, it melts.
☐ a heat ☐ b will heat ☐ c heated

2 Complete with the correct form.

2 × 1 pts

- If a planet _____ (have) liquid water, it might support life.
- Plants _____ (not / grow) if they don't get light.

3 Judge the sentence.

2 × 1 pts

- If you mix hydrogen and oxygen correctly, you get water. ☐ Correct ☐ Incorrect
- If a rocket will lose power, it falls back to Earth. ☐ Correct ☐ Incorrect

4 Complete with the correct form.

1 × 1 pts

Challenge

- A: What _____ (happen) if a spacecraft _____ (lose) contact with Earth?

5 Reorder the sentence.

1 × 1 pts

Challenge

- support if a planet an has can life it atmosphere, .

First Conditional (Real Future Possibilities)

1 · NOTICE

- If scientists **find** a habitable planet, humanity **will have** a new home.
- We **will solve** the overpopulation problem if we **develop** better technology.
- If we **don't reduce** our resource consumption, future generations **will suffer**.
- If the mission **is** successful, astronauts **will land** on Mars by 2040.

Are these situations real possibilities for the future, or impossible dreams? What tense follows 'if', and what tense is in the main clause?

2 · DISCOVER — A · COMPLETE THE RULE

Complete the rule with the words in the box.

will + base verb

Simple Present

a real, possible future result

1. We use the first conditional for _____.
2. The if-clause uses the _____.
3. The main clause uses _____.

B Build sentences

Use the cues to build first conditional sentences about the future.

e.g. scientists / find / a habitable planet humanity / have / a new home

If scientists find a habitable planet, humanity will have a new home.

1. we / develop / better technology we / solve / the overpopulation problem

2. we / not reduce / resource consumption future generations / suffer

3. the mission / be / successful astronauts / land / on Mars by 2040

4. ? / you / discover / a new planet what / you / call / it

C Your turn

Write three first conditional sentences predicting real possibilities for the future of technology or space exploration.

If scientists...

If we don't...

If humans...

RULE

The first conditional describes a real, likely situation in the future and its result. If + Simple Present, will + base verb.

TR First conditional, gelecekte gerçekleşmesi mümkün olan durumlar ve sonuçları için kullanılır. If + Simple Present, will + fiil.

When?

We use the first conditional to talk about realistic future predictions, plans and likely results.

TR Gelecekle ilgili gerçekçi tahminler, planlar ve olası sonuçlar hakkında konuşurken first conditional kullanırız.

POSITIVE	NEGATIVE	QUESTION	SHORT ANSWERS
If we develop better technology, we will solve the problem. Astronauts will land on Mars if the mission is successful.	If we don't act now, the climate crisis will get worse. We won't find life if we don't keep exploring.	What will happen if we discover a new planet? Will humans live on Mars if it becomes habitable?	Yes, they will. / No, they won't. It will get worse. / We won't.

X WRONG	✓ RIGHT	WHY?
If we will develop better technology, we will solve the problem.	If we develop better technology, we will solve the problem.	Never use 'will' in the if-clause; use the Simple Present instead. TR If cümlecğinde 'will' kullanılmaz, Simple Present kullanılır.
If scientists find a new planet, they named it quickly.	If scientists find a new planet, they will name it quickly.	The main clause needs 'will' to express a future result. TR Ana cümlede gelecek sonuç için 'will' gerekir.

6 Choose the correct option.

3 × 1 pts

- If we _____ our resource consumption, future generations will suffer.
 (a) don't reduce (b) won't reduce (c) didn't reduce
- If the mission is successful, astronauts _____ on Mars.
 (a) land (b) will land (c) landed
- Humanity _____ a new home if scientists find a habitable planet.
 (a) will have (b) has (c) had

7 Complete with the correct form.

2 × 1 pts

- If we _____ (develop) better technology, we will solve the overpopulation problem.
- The climate crisis _____ (get) worse if we don't act now.

8 Judge the sentence.

2 × 1 pts

- If humans build a colony on the Moon, it will need to be self-sufficient. ☐ Correct ☐ Incorrect

- If we will not protect the environment, life will become harder. ☐ Correct ☐ Incorrect

9 Complete with the correct form.

1 × 1 pts

Challenge

- A: What _____ (happen) if scientists _____ (discover) an exoplanet like Earth?

10 Reorder the sentence.

1 × 1 pts

Challenge

- if Mars 2040 on by astronauts successful, is mission will the land .

Second Conditional (Unreal or Unlikely Present-Future Situations)

1 · NOTICE

- If we **lived** on Mars, we **would need** artificial oxygen every day.
- If humanity **discovered** another Earth-like planet, it **wouldn't solve** our problems on Earth immediately.
- What **would** you **do** if you **had** the chance to travel to space?
- If I **were** a scientist, I **would focus** on renewable energy.

Are these situations real or imagined/unlikely? What form of the verb follows 'if', and what comes in the main clause?

2 · DISCOVER — A · COMPLETE THE RULE

Complete the rule with the words in the box.

Simple Past would + base verb unreal or unlikely were

1. We use the second conditional for _____ present or future situations.
2. The if-clause uses the _____.
3. The main clause uses _____.
4. With 'I' and 'he/she/it', we often use _____ instead of 'was' in formal English.

B Build sentences

Use the cues to build second conditional sentences about hypothetical future situations.

e.g. we / live / on Mars we / need / artificial oxygen

If we lived on Mars, we would need artificial oxygen.

1. I / be / a scientist I / focus / on renewable energy

2. humanity / discover / another Earth-like planet it / not solve / our problems immediately

3. governments / invest / more in space research we / travel / to other planets sooner

4. ? / you / have / the chance to travel to space what / you / do

C Your turn

Write three second conditional sentences imagining unlikely or impossible future situations related to space or technology.

If I were...

If we lived on...

If scientists discovered...

RULE

The second conditional describes unreal, imaginary or unlikely present/future situations. If + Simple Past, would + base verb. With I/he/she/it, formal English often prefers 'were' instead of 'was'.

TR Second conditional, gerçek olmayan, hayali ya da gerçekleşmesi pek olası olmayan şimdiki/gelecekteki durumlar için kullanılır. If + Simple Past, would + fiil. 'I/he/she/it' ile resmi İngilizcede 'was' yerine 'were' tercih edilir.

When?

We use the second conditional to imagine impossible or very unlikely future scenarios.

TR Hayal kurarken, imkansız ya da çok düşük ihtimalli gelecek senaryolarını tartışırken second conditional kullanılır.

POSITIVE	NEGATIVE	QUESTION	SHORT ANSWERS
If we lived on Mars, we would need artificial oxygen.	If humanity discovered a new planet, it wouldn't solve everything.	What would you do if you had the chance to travel to space?	Yes, I would. / No, I wouldn't.
I would explore space if I were an astronaut.	We wouldn't survive there if we didn't bring water.	Would you live on another planet if you could?	It would need... / It wouldn't need...

X WRONG	✓ RIGHT	WHY?
If we would live on Mars, we would need oxygen.	If we lived on Mars, we would need oxygen.	Never use 'would' in the if-clause; use the Simple Past instead. TR If cümlecğinde 'would' kullanılmaz, Simple Past kullanılır.
If I was a scientist, I would study black holes.	If I were a scientist, I would study black holes.	In formal/standard usage, 'were' is preferred with 'I', not 'was'. TR Resmi/standart kullanımda 'I' ile 'were' tercih edilir.

11 Choose the correct option.

3 × 1 pts

- If we _____ on Mars, we would need artificial oxygen.
 (a) live (b) lived (c) will live
- If I _____ a scientist, I would study black holes.
 (a) am (b) was (c) were
- What _____ you do if you had the chance to travel to space?
 (a) will (b) would (c) do

12 Complete with the correct form.

2 × 1 pts

- If governments _____ (invest) more in space research, we would travel further.
- Humanity _____ (not / solve) all its problems if it discovered a new planet.

13 Judge the sentence.

2 × 1 pts

- If I had the chance, I would join a mission to Mars. ☐ Correct ☐ Incorrect

- If humans would live on the Moon, they would need domes. ☐ Correct ☐ Incorrect

14 Complete with the correct form.

1 × 1 pts

Challenge

- A: If you _____ (can) design a spacecraft, what _____ (it / look) like?

15 Reorder the sentence.

1 × 1 pts

Challenge

- if we we oxygen Mars, on would need lived .

Wish Clauses (Wishes about the Present and the Past)

1 · NOTICE

- I wish we **had** cleaner energy today — pollution is such a huge problem.
- Scientists wish they **knew** more about distant galaxies right now.
- I wish humanity **had discovered** a habitable planet years ago.
- She wishes she **could travel** to space one day.

Which wishes are about the present, and which are about the past? What verb forms follow 'wish' in each case?

2 · DISCOVER — A · COMPLETE THE RULE

Complete the rule with the words in the box.

Simple Past Past Perfect could + base verb a present situation you want to be different
a past situation you regret

1. Wish + _____ describes _____.
2. Wish + _____ describes _____.
3. Wish + _____ talks about an ability or possibility you want now.

B Build sentences

Use the cues to build wish sentences about the present or the past.

e.g. we not have / cleaner energy (now)

I wish we had cleaner energy.

1. scientists not know / more about distant galaxies (now)

2. humanity not discover / a habitable planet (years ago)

3. she not can travel / to space (now / ability)

4. we not start / protecting the environment earlier (in the past)

C Your turn

Write three wish sentences: one about the present (something you want to be different now), one about the past (something you regret), and one using 'wish...could'.

I wish... **I wish I had/hadn't...** **I wish I could...**

RULE

Wish + Simple Past describes a present situation we want to be different. Wish + Past Perfect describes a past situation we regret. Wish + could + base verb expresses a present wish for ability or possibility.

TR Wish + Simple Past, şimdiki zamanda farklı olmasını istediğimiz bir durumu anlatır. Wish + Past Perfect, geçmişte pişmanlık duyduğumuz bir durumu anlatır. Wish + could + fiil, şu anki bir yetenek ya da imkan isteğini anlatır.

When?

We use wish clauses when we are unhappy with a present situation, or when we regret something we did or didn't do in the past.

TR Şu anki durumdan memnun olmadığımızda ya da geçmişte farklı bir şey yapmış olmayı dilediğimizde wish cümlelerini kullanırız.

POSITIVE	NEGATIVE	QUESTION	SHORT ANSWERS
I wish we had cleaner energy.	I wish we didn't waste so much water.	What do you wish scientists knew?	I wish I could. / I don't really wish that.
I wish humanity had discovered a habitable planet.	She wishes she hadn't ignored the warnings.	Do you wish you could travel to space?	Yes, I do. / No, not really.

X WRONG	✓ RIGHT	WHY?
I wish we have cleaner energy.	I wish we had cleaner energy.	For a present wish, use the Simple Past after 'wish', not the Simple Present. TR Şimdiki durum için wish'ten sonra Simple Past kullanılır, Simple Present değil.
I wish humanity discovered a planet years ago.	I wish humanity had discovered a planet years ago.	For a past regret, use the Past Perfect after 'wish'. TR Geçmişteki pişmanlık için Past Perfect kullanılır.

16 Choose the correct option.

3 × 1 pts

- I wish scientists _____ more about distant galaxies right now.
(a) know (b) knew (c) had known
- I wish we _____ started protecting the environment earlier.
(a) have (b) had (c) would
- She wishes she _____ travel to space one day.
(a) can (b) could (c) will

17 Complete with the correct form.

2 × 1 pts

- I wish we _____ (have) cleaner air in our cities.
- I wish humanity _____ (discover) a habitable planet years ago.

18 Judge the sentence.

2 × 1 pts

1. I wish I could see the stars more clearly from the city. ☐ Correct ☐ Incorrect
-

2. I wish scientists will find a solution soon. ☐ Correct ☐ Incorrect
-

19 Complete with the correct form.

1 × 1 pts

Challenge

1. A: Do you ever wish you _____ (be) an astronaut? B: Yes! I wish I _____ (start) studying physics earlier.

20 Reorder the sentence.

1 × 1 pts

Challenge

1. we had I cleaner energy wish .
-

B2.1

The Hunt for a Second Earth · Life in 2126: Three Predictions

Hazırlık Sonrası 9. Sınıf

Name – Surname

Class

No

Date

Aim Understand the main idea and details, make inferences and connect the text to your own life.

1 Before you read

Make predictions before you read.

1. Look at the title. What do you think 'a second Earth' means?
2. What do you already know about how scientists search for planets outside our solar system?

The Hunt for a Second Earth

- 1 For centuries, humans have looked up at the night sky and wondered whether we are alone in the universe. Today, that question is closer to being answered than ever before. Using powerful space telescopes, astronomers have identified thousands of exoplanets — planets that orbit stars outside our solar system — and a growing number of them lie in what scientists call the 'habitable zone', the narrow distance from a star where temperatures allow liquid water to exist.
- 2 Finding an exoplanet is only the first step. To know whether a planet could actually support life, researchers study its atmosphere, its size, and the type of star it orbits. If a planet is too close to its star, it will be far too hot; if it is too far away, any water on its surface will freeze. Even a planet in the habitable zone might lack a protective atmosphere, leaving it exposed to deadly radiation. Because of these strict conditions, scientists estimate that only a small fraction of the exoplanets discovered so far could realistically host life.
- 3 Even so, the search continues, and new missions are launched almost every year. Some researchers believe that if we keep improving our telescopes and analysis methods, we will find strong evidence of a genuinely habitable world within the next few decades. Others are more cautious, arguing that space is so vast that finding the right planet — let alone actual life on it — could still take much longer. Either way, the hunt for a second Earth has changed the way many people think about humanity's place in the universe.

265 words

2 While you read

5 × 2 pts

Circle the correct option.

- What is the main idea of the text?
 - Scientists have already found a second Earth.
 - Astronomers are searching for exoplanets that could support life, but the conditions are very strict.
 - Space telescopes are too weak to find any exoplanets.
 - The 'habitable zone' is the distance from a star where _____ can exist.
 - According to the text, a planet too close to its star will be:
 - too cold
 - too hot
 - too small
 - All exoplanets found in the habitable zone are known to support life. ☐ Correct ☐ Incorrect
- _____
- A planet without a protective atmosphere is exposed to deadly _____.

3 After you read*Write short answers. Then compare with a partner.*

- Do you think humanity will find clear evidence of a habitable exoplanet in your lifetime? Why or why not?

- Write one sentence using the first conditional about what might happen if scientists find a truly habitable planet.

1 Before you read*Make predictions before you read.*

- What do you imagine daily life will be like in 100 years?

- Which area do you think will change the most: energy, technology, or space exploration?

Life in 2126: Three Predictions

- What will daily life look like a century from now? No one can predict the future with certainty, but many scientists, engineers and futurists agree on a few likely directions, based on trends that are already visible today.
- The first prediction concerns energy and the environment. If humanity continues to rely on fossil fuels, the climate crisis will almost certainly get worse, with more extreme weather and rising sea

levels. Many experts believe, however, that renewable energy will become the main power source worldwide well before 2126, driven by both necessity and rapidly falling costs. Cities may be redesigned to be almost completely self-sufficient, generating their own energy and recycling nearly all their waste.

- 3 The second prediction involves artificial intelligence and automation. Machines already perform many tasks once done only by humans, from analysing medical scans to writing simple reports. If this trend continues, entire industries could look completely different, and people may spend far more time on creative, social or scientific work rather than routine tasks. Finally, many researchers expect real progress in space technology: permanent research bases on the Moon, regular cargo flights to Mars, and perhaps even the first small human settlements beyond Earth. Whether these predictions come true exactly as described, one thing seems certain — the next century will bring changes as dramatic as anything in the last hundred years.

225 words

2 While you read

5 × 2 pts

Circle the correct option.

- What is the text mainly about?
☐ a A history of space exploration
☐ b Predictions about energy, technology and space in the next century
☐ c A list of countries with the best universities
- Many experts believe _____ will become the main power source worldwide before 2126.
- According to the text, artificial intelligence has had no effect on jobs so far. ☐ Correct ☐ Incorrect
- What does the text suggest about future cities?
☐ a They may become almost completely self-sufficient. ☐ b They will stop using any energy at all.
☐ c They will be abandoned in favour of space colonies.
- Researchers expect permanent research bases on the _____ and regular cargo flights to Mars.

3 After you read

Write short answers. Then compare with a partner.

- Which of the three predictions in the text do you find most exciting or most worrying? Why?

- Write one sentence with 'I wish' about something you would like to be different in today's world.

1. Predict: what three things do you think the podcast host will explain about habitable planets?

2 While you listen

4 × 2 pts

Listen and circle the correct option.

1. According to the guest, what does a planet need to allow liquid water?
Ⓐ The right distance from its star Ⓑ A very fast rotation Ⓒ A large number of moons
2. Mars currently has a thick, protective atmosphere. ☐ Correct ☐ Incorrect
3. Without an atmosphere, a planet cannot hold on to _____ or protect itself from radiation.
4. What would scientists still need after finding water and a thick atmosphere?
Ⓐ More evidence, such as signs of gases produced by living things Ⓑ Nothing else at all
Ⓒ Proof that the planet has no moons

1 Before you listen

1. What universal issue would you most like to design a solution for: overpopulation, pollution, or resource consumption?

2 While you listen**3 × 2 pts***Listen and circle the correct option.*

1. What is the main task the teacher describes?
 - a Write an essay about the history of technology
 - b Design a technology that solves a universal issue and write a futuristic journal entry
 - c Memorise a list of inventions
 2. Students should choose one issue such as overpopulation, resource consumption, or _____.
 3. Students will present their ideas individually. ☐ Correct ☐ Incorrect
-

YEAR 9 (AFTER PREP) · THEME 8 · LIFE IN THE UNIVERSE & THE FUTURE

Speaking & Writing

Speaking and writing tasks

B2.1

Hazırlık Sonrası 9. Sınıf

Name – Surname

Class

No

Date

Aim Use the words and structures of the theme in real communication tasks.

S1 If We Could Solve One Problem...

In pairs, discuss universal issues that could affect the next century, such as overpopulation, resource consumption, or the climate crisis. Use at least two conditional sentences (zero, first or second) and one wish clause. Then join another pair and share your best idea.

S2 My Futuristic Journal Entry

Imagine you are living one hundred years in the future. Prepare a two-minute talk describing a normal day in your life, including at least one piece of advanced technology that solved a universal issue and how life is different from today.

W1 A Futuristic Journal Entry

Write a futuristic journal entry (120–150 words) as if you are living in the year 2126. Describe your day, mention one universal issue that has been solved (or made worse), and refer to at least one piece of advanced technology.

CHECKLIST

- ☐ Clearly set in the future (a specific year or 'a century from now')
- ☐ Mentions at least one universal issue and how it changed
- ☐ Describes at least one piece of advanced technology
- ☐ Uses at least one conditional sentence and one wish clause
- ☐ 120–150 words

W2 A Proposal: My Invention for the Future

Write a short proposal describing an invention or piece of technology that could help solve a universal issue such as overpopulation, resource consumption, or environmental crises. Explain what it does, how it works, and what would happen if it were used widely.

CHECKLIST

- ☐ Clear name and purpose for the invention
- ☐ Explains the universal issue it addresses
- ☐ Uses at least one first or second conditional sentence to explain results
- ☐ Logical structure: problem → invention → result
- ☐ 150–180 words

2 Homework

Choose the tasks for your level.

LEVEL	TASK
Support	Match 8 vocabulary words to their Turkish meanings.
	Complete 5 zero conditional / first conditional gap-fill sentences about science and space.
	Sort 6 phrases into 'Now' and 'In the Future' columns (e.g. 'paper maps', 'robot assistants').
	Choose the correct word (habitable / renewable / artificial) to complete 4 sentences about future technology.
Core	Write 5 sentences predicting the future using the first conditional.
	Complete the Grammar 1, 2 and 3 practice sections online.
	Write a short paragraph (60–80 words) describing what you think a 'career of the future' will involve, using at least two first conditional sentences.
	Read a short paragraph about space travel with 5 conditional/wish-clause mistakes and correct them.
Extension	Research one real space mission (past or planned) and write a short paragraph (80–100 words) explaining what it hopes to discover.
	Record a 1-minute voice note describing your futuristic journal entry idea.
	Design a short promotional leaflet (100–120 words) for a fictional future space tourism company, including at least one first conditional sentence.
	Write an application form response (50–70 words) explaining why you would like to join a future Mars colony training programme.

MY PROGRESS — I CAN...

- ☐ understand the main ideas of this theme.
- ☐ use the target words.
- ☐ use the target grammar.
- ☐ talk about this theme.
- ☐ write about this theme.
